Description of NLP field

- Extract meaningful information from
 - Text
 - Speech
- Generate text

Some well-known NLP tasks

- Machine translation
- Speech recognition
- Named-entity recognition (NER)
- Intent classification

Some well-known NLP tasks

- Machine translation
- Speech recognition
- Named-entity recognition (NER)
- Intent classification

What is [London's](location) weather [tomorrow](date)?

Some well-known NLP tasks

- Machine translation
- Speech recognition
- Named-entity recognition (NER)
- Intent classification

What is [London's](location) weather [tomorrow](date)?

GetWeather

Language model

- Rule-based
- Statistical

Language model

- Rule-based
- Statistical

Tries to capture grammar

Task	Example
Spell correction	$P(\textit{my car broke}) > P(\textit{my car boke})$
Machine translation	$P(\textit{green house}) > P(\textit{house green})$
Speech recognition	$P(\textit{the red car}) > P(\textit{she read ar})$

***Not tiger does that
happy look***

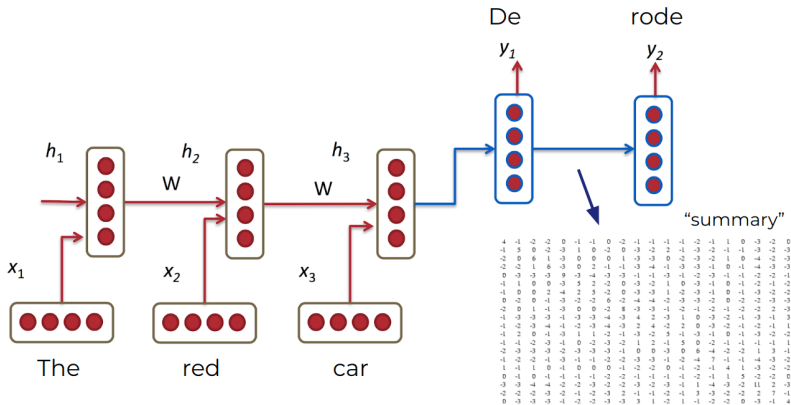

≠

***That tiger does not
look happy***

Recurrent neural networks

Translating

Insufficient history

Norwegian frigate sinking has far-reaching implications.

Het zinken van het Noorse fregat heeft verstrekkende gevolgen.

Gated recurrent neural networks

Contents

- 1 Introduction
- 2 Preliminaries
- 3 **Benchmarking**
 - Datasets
 - Systems
 - Tool and results
- 4 Improving accuracy

The screenshot displays a chatbot interface with a purple border. The chat history shows a conversation with a customer named ACME. The customer asks, "Where should we send the confirmation to?". The chatbot responds, "Please send it to amy@example.com", accompanied by a female avatar icon. The customer then sends a thumbs-up emoji. Next, the customer asks, "Should we make that your primary email?". The chatbot responds, "Oh, what is it right now?", also with a female avatar icon. Below the chat history, a section titled "Next best action:" lists three actions with their respective confidence scores: "fetch_primary_email" (88%, checked), "hand_off_to_human" (8%), and "fetch_primary_phone" (4%).

ACME: Where should we send the confirmation to?

Please send it to amy@example.com

👍

ACME: Should we make that your primary email?

Oh, what is it right now?

Next best action:

<input checked="" type="checkbox"/>	fetch_primary_email	88%
<input type="checkbox"/>	hand_off_to_human	8%
<input type="checkbox"/>	fetch_primary_phone	4%

Automatically responding to customers

Rasa training data format

```
## intent:check_balance
- what is my balance <!-- no entity -->
- how much do I have on my [savings](source_account) <!-- entity "source_account" -->
- how much do I have on my [savings account](source_account:savings) <!-- synonym -->
- Could I pay in [yen](currency)? <!-- entity matched by lookup table -->

## intent:greet
- hey
- hello

## synonym:savings <!-- synonyms, method 2 -->
- pink pig

## regex:zipcode
- [0-9]{5}

## lookup:currencies <!-- lookup table list -->
- Yen
- USD
- Euro
```

Manage Context 2

Hello, I'm a demo customer care virtual assistant to show you the basics. I can help with directions to my store, hours of operation and booking an in-store appointment

hi

#General_Greetings ▼

Hello. Good morning

what are your opening hours?

#Customer_Care_Store_Hours ▼

Our hours are Monday to Friday
10am to 8pm and Friday and
Saturday 11Am to 6pm.

Enter something to test your virtual assistant

Contents

- 1 Introduction
- 2 Preliminaries
- 3 Benchmarking
- 4 Improving accuracy
- 5 Conclusions
 - Research question 1
 - Research question 2

Can an open-source NLU benchmarking tool be created?

Yes. Requirements:

- Continuous maintenance
- Support vendor APIs
- More metrics
- Multiple runs
- More datasets

Can the accuracy for NLU be increased?

Yes. Each few months a new SOTA paper.

Why BERT is suspected to have improved SOTA:

- SOTA NER
- Deeply bidirectional
- More history.

Further work: Whether accuracy improvements are significant.
